

**TST02 Maisie**  
**RT 14/7/89**

21 years old.

ESW

Lives at home with her parents. At [UNIVERSITY] in the second year of B Ed, wants to teach nursery school. Originally met her at [NAME OF CLINIC]. Heterosexual. Small, attractive, auburn curly hair worn in a ponytail. Quite confident and approachable.

Went to an all girl's grammar school. Taught basic conception and contraception at school, they mentioned STD's although not AIDS. Mum has been quite open with her about periods and contraception. Quite well informed about AIDS. Knew HIV/AIDS distinction. Knew not only confined to IV and gays. Wasn't sure about latency. Safe sex = condoms.

Risk re sex: Has never had unprotected sex, always used contraception, initially condoms. now the pill, doesn't see herself as the sort of person who takes risks.

SAFE SEX: Condom. Doesn't think that she needs to worry about AIDS as she is in a long term relationship (4 yrs) which she expects to continue to settling down with kids and home. Doesn't think marriage is vital in this.

RELATIONSHIPS: Been with current boyfriend for 4 years, has known him since kids, he lives opposite. Seem to have a close family life.

SEXUALITY: Talked a bit about what sort of relationship it was appropriate to have sex in. She said that she wasn't the type to have casual sex. Has had 2 sexual relationships. First on sex wasn't v. good, says she is much happier in present one.

Not very in-depth interview. She was in a hurry as a friend was waiting. Should have asked more searching questions.
